

Yash Patel

Sault Ste. Marie, Ontario | yashnilay@gmail.com | yashnilay.ca | linkedin.com/in/yash-n-patel/ | github.com/DarkishLocket10

EDUCATION

Bachelor of Computing (Honours) | Queen's University | Kingston, Ontario
Specialization: Software Design | Focus: Data Analytics, Artificial Intelligence

April 2025

EXPERIENCE

Bruce Power | *Full Stack Developer & Supplier Performance Analyst* | Tiverton, ON (May 2023 – August 2024)

- Designed and built a supply chain KPI web app (PHP, JavaScript, MySQL) with automated ingestion/validation and scheduled distribution. Cut report turnaround from several days to 1 business day and eliminated manual consolidation.
- Full-stack developer on a 3-person team. Collaborated with a team lead and senior analyst to establish and deliver reliable KPI tracking across 42 Tier-1 and Tier-2 suppliers.
- Built data quality gates (schema checks, null/duplicate detection), audit logs, and cron-driven report generation to reduce errors and increase trust in KPIs.
- Led monthly supplier meetings to present KPI scorecards, highlight risks, and align on budget impacts and time-to-completion commitments, enabling earlier risk detection and proactive decision-making.

HYNK Group | *Computer Technician & Business Operations Associate* | Sault Ste. Marie, ON (July 2014 – September 2021)

- Designed a relational SQL database and Python scripts to automate check-in and data entry, cutting administrative workload by ~45% and improving data consistency.
- Assisted in planning and executing business projects and improved customer service practices, contributing to smooth overall operations.

PROJECTS

CullPix (Desktop Application) | C++17, Qt 6, CMake (August 2025 – Present)

- Built a performance-oriented desktop app for fast photo triage with multiple format support. Shipped a Windows 64-bit portable release in September 2025.
- Implemented asynchronous thumbnail loading, a sliding-window image cache, and a priority queue to keep navigation responsive under heavy I/O.

DevOps Guard | .NET, C#, HTML, SQL, Docker (September 2025 – Present)

- Shipped a compact dashboard tracking work items and risk/SLA KPIs. Dockerized with GitHub Actions CI.
- Built a .NET8/C# API with SQL (EF Core); CRUD with filters, metrics history & daily snapshots.

Self-Hosted Server (Personal DevOps) | Linux, Docker, Bash, Python, SQL, CUDA (September 2018 – Present)

- Deployed a Docker-based homelab (personal cloud, media, file organization, SQL) on Linux. Provisioned Windows/Ubuntu/macOS VMs, set up GPU/CUDA for ML experiments.
- Set up reverse proxy (Nginx) and TLS/automatic backups.

Data Analytics Projects | MATLAB (January 2022 – December 2022)

- Thoroughly reported on 10+ data analysis projects using advanced techniques (polynomial regression, neural networks, PCA/LDA, supervised ML), rigorously evaluating model performance (AUC-ROC, confusion matrices).

Personal Website & Blog | Astro, TypeScript, Tailwind, HTML (June 2025 – Present)

- Designed and shipped a content-driven Astro portfolio with a tag-indexed blog and lightweight, modern UI.

EXTRACURRICULAR INVOLVEMENT

Queen Elizabeth Public School | *FIRST Robotics Mentor* | Sault Ste. Marie, ON (November 2016 – January 2019)

- Mentored and taught 20+ students in robotics programming and fundamentals, fostering a collaborative and inclusive team environment.
- Guided teams through iterative design and debugging processes, resulting in several competition accolades and significant growth in students' problem-solving skills.

SKILLS

Languages: Python, C++, Java, JavaScript/TypeScript, SQL, PHP, Bash, C, C#, MATLAB

Frameworks: Qt 6, React, .NET, Next.js, Flask, Astro

Systems & Data: MySQL, Linux, Docker, Git, Power BI

ML/AI: PyTorch, TensorFlow, CUDA, Pandas
